

# Telco Customer Churn Analysis Report

## Executive Summary

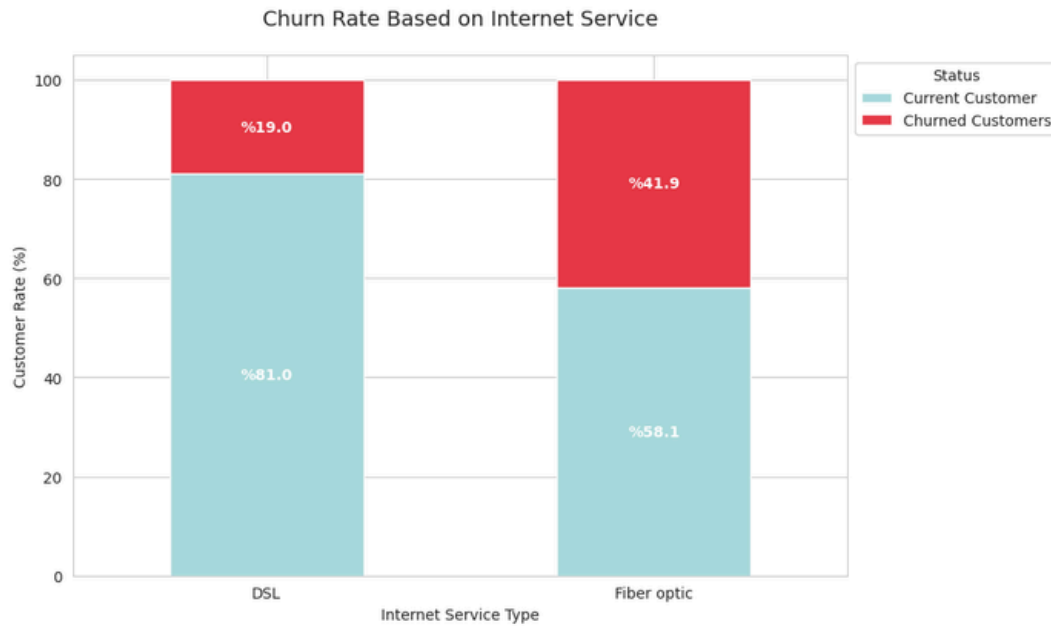

This report concludes the analysis of a dataset comprising over 7,000 customers, investigating the reasons behind high churn rates among fiber optic users and those with short-term contracts.

## 1. Contract Type & Retention

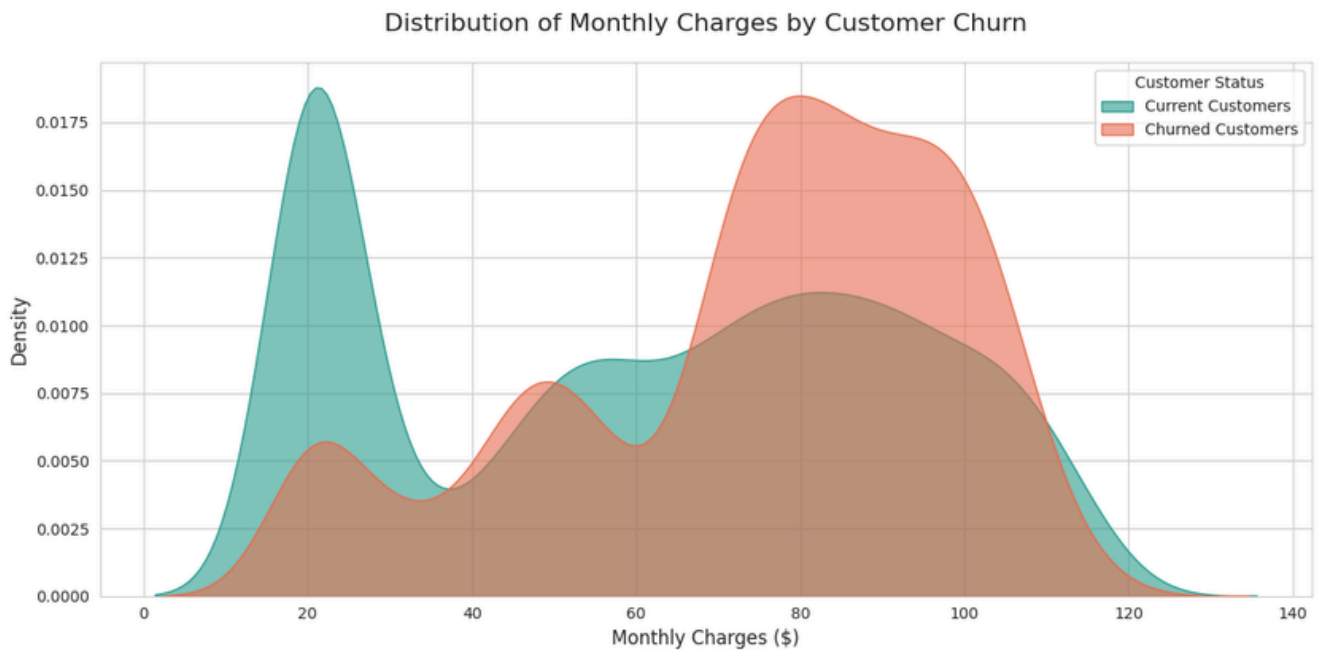

- As shown in the table churn rate of month-to-month customers is significantly higher than long-term customers. Thus, providing better offers to encourage the customers to switch to the annual contracts are highly recommended.

## 2. Internet Service & Pricing

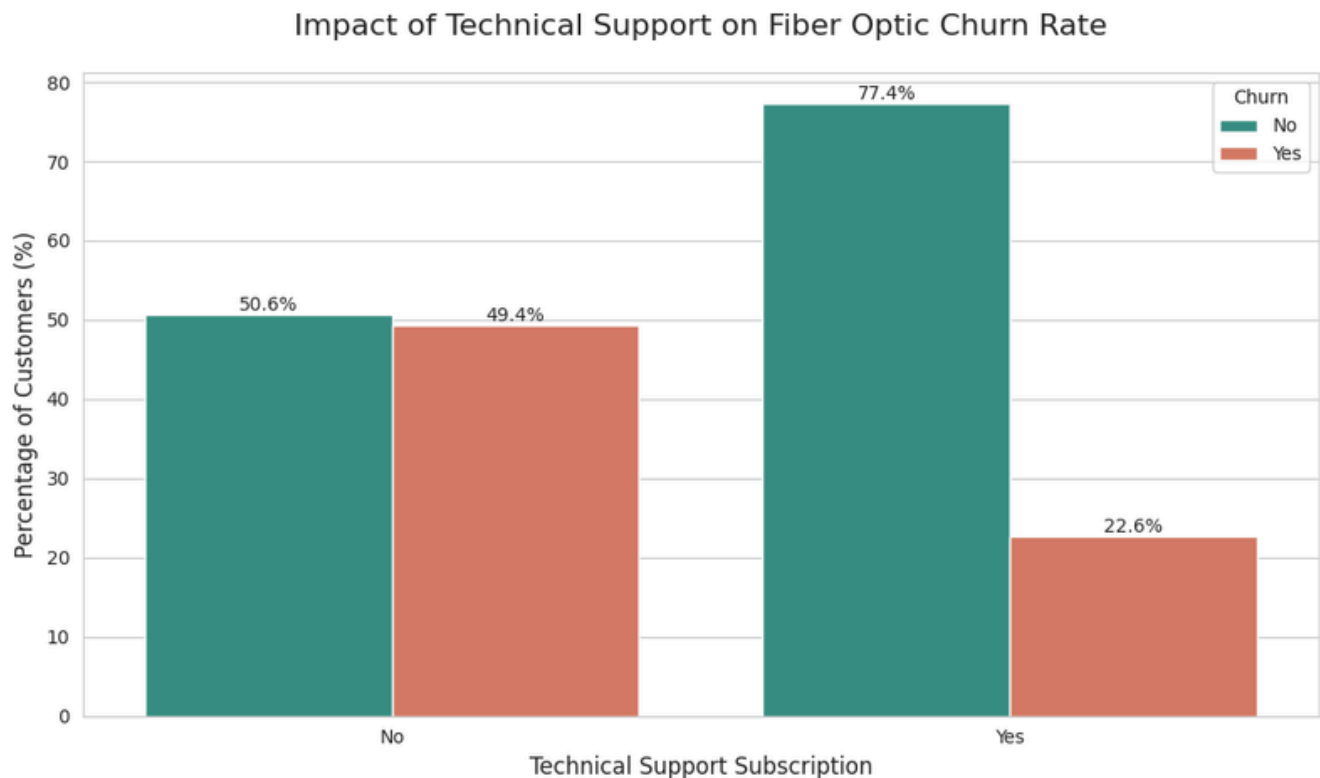

- As illustrated in the table, fiber optic users have the highest %41.9 rate of churn.

- Fiber optic users are also the segment that pays average of over \$90.

The data could indicate better offers from other companies or a lack of technical support.

### 3. Tech Support Analysis

- The table explores the difference between fiber optic users who have tech support subscription and those who do not. **The chart shows that fiber optic users without tech support have a significantly higher churn rate (49.4%) compared to those who have it (22.6%).**

Offers such as “Free VIP Tech Support” for fiber optic users are recommended.
